ACKNOWLEDGMENT

From the beginning this study has been under the guidance of Dr. Guy M. Wilson to whom the author wishes to acknowledge her indebtedness.

The author is grateful to Dr. Herbert Blair and Dr. Donald D. Durrell of Boston University, who were helpful in submitting suggestions and criticisms.

The author is indebted to Dr. Walter F. Dearborn, Miss Eleanor H. Hayes, and Miss Nellie Powers for permission to use their files as the source of data for this study.

Chapter I

STATEMENT OF THE PROBLEM

Research has shown that there is enough reading in the Terman-Binet Intelligence Test to give a child a reduced score if his reading ability is low. (Reference #3) [1]

The writer raises the question in this thesis as to what effect the arithmetic sections of group intelligence tests have on the final score on such tests. It is realized that this study is not all-inclusive and leaves many related problems entirely untouched.

The tests used in this study are National Intelligence Tests Scale A-Form I; Terman Group Test of Mental Ability; Revised Alpha Examination Form 7; and Kuhlman-Anderson Intelligence Test. After ascertaining that the data from these particular tests could be secured, the writer wrote to the authors of these tests making inquiries about the arithmetic in the respective tests, using the three questions which follow:

1. On what basis were the elements of arithmetic selected for the intelligence test?
2. What was the deciding factor in determining whether the arithmetic should be of a problem type or just simply some of the four fundamentals in arithmetic-addition, subtraction, multiplication, and division?
3. Arithmetic is usually a difficult subject for people. Why was it selected as one of the elements in an intelligence test?

---

1. References are found in the bibliographies with numbers corresponding. (See page 67)

Replies were received from Dr. Otis, Dr. Terman, and Dr. Bolstad. The following are quotations from the letters received:

Dr. Otis wrote as follows: "I would answer by saying that since I did not make the selection myself (in the National and Terman Tests) I can only infer what reasons the authors had for putting arithmetic problems in their intelligence tests.

"Perhaps I might explain why I have used arithmetic problems in my own intelligence tests. I did so because after trying out about sixteen different types of questions, all of which I thought might measure intelligence to some extent, I found that the ten best types of intelligence tests included the arithmetic.

"My criterion of whether the test measured intelligence was partly correlation between scores in that test and scores in all the tests together (this in order to determine whether the test measured some special ability or a general ability), and partly whether pupils of a given age who did best in the test were also making the most rapid progress through school.

"I think you will agree that ability to work an example in arithmetic (mere computation) is largely a matter of habit and memory--memory of the addition facts, subtraction facts, and so on--and routine of procedure, whereas problem solving calls for a 'higher type' of thinking--the type of thinking more nearly what we have in mind when we talk about

intelligence. Moreover, the kind of reasoning used in arithmetic problems solving undoubtedly has much in common with the ability to learn to read, to spell, and to succeed in the other subjects taught in school..."

Dr. Terman wrote: "The arithmetic elements of my group test were submitted from a much larger number which were tried out. The criterion for retention of an item was that it should correlate as highly as possible with a positive outside criterion of intellectual ability."

"Arithmetic problems have always shown much higher correlation with other intellectual measurements that mere computation..."

Dr. Bolstad, who cooperated in constructing the Kuhlmann-Anderson Tests wrote: "In the selection of all of the tests included in the Kuhlmann-Anderson Tests one factor played by far the biggest part, namely, ability to discriminate. If anything in arithmetic played that part, then the arithmetic was included. If it would not show capacity to discriminate then it was thrown out. An intelligence test that does not discriminate is not intelligence test at all."

"The Kuhlmann-Anderson Tests constitute an outgrowth of experimental work that at first included a large variety of items, and a large variety of individual tests. The tests that finally appear and contain arithmetic figures is a survival of the fittest..."

These letters indicate slightly different view-points and procedures on the selection of elements or section of the

tests which were studied. However, it is not proposed to discuss the differing view points brought out by these letters.

In setting up the present study the writer thought to secure about two hundred and fifty test returns on each of the four tests chosen. The numbers vary slightly from the initial set up, but the total returns on the four tests exceed one thousand, distributed over Grades IV to XII.[1]

It is considered an advantage that the tests were given by others and the task, therefore, was simply to evaluate the results.

The method pursued is developed in the next section.

The problem taken for study was "Do the arithmetic scores in these four general intelligence tests throw the scores in one direction or another?", or to put it differentyly, "If the plus and minus results due to leaving out the arithmetic are charted, does it give a normal curve centered over zero or what does it give?"

The work involved in this thesis is more or less technical and no attempt has been made to simplify it so that it may be understood by one who has not gone a considerable distance into psychometrics.

1. The writer is under obligation to field workers for permission to use test files, as follows:

Kindness of Dr. Walter F. Dearbon
Revised Army Alpha Examination-Grade XII

Kindness of Miss Eleanor H. Hayes

Terman Group Tests of Mental Ability-Grade IX
Kuhlmann-Anderson Intelligence Test-Grade VI

Kindness of Miss Nellie Power
National Intelligence Test-Grade VII

CHAPTER II

METHOD AND PROCEDURE

Permission was secured from school departments or directors of measurement in nearby cities which made files availabe on tests actually given and used in the respective school departments.[1]

A general scheme was worked out for tabulating data from the tests, and this scheme becomes apparent on examination of the tables. (Tables IA, pages 7-12; IB, pages 19-25; IC, pages 31-36; ID, pages 42-47). Having determined the part of the test that involved the arithmetic, it was then possible to draw off further data for each student, called "candidate". (Column 1, Tables IA, pages 7-12; Table IB, pages 19-25; Table IC, pages 31-36; Table ID, pages 42-47).

The total test scores including arithmetic of each candidate, occur in column 2 of Tables IA, pages 7-12; IB, pages 19-25; and IC, pages 31-36 for these of the tests--National Intelligence Test, Terman Group Test of Mental Ability, and Revised Army Alpha Examination respectively.

Arithmetic scores of each candidate appear in column 3 of Table IA, pages 7-12 for the National Intelligence Test; and Table IB, pages 19-25 for the Terman Group Tests of Mental Ability. For the Revised Army Alpha Examination the data may be found in Table IC, pages 31-36, columns 3,4,5,6 and making a total arithmetic score in column 7.

1. Dr. Walter F. Dearborn — Medford High School
   Harvard University
   Tests given in 1932-33

   Miss Eleanor H. Hayes — Belmont Schools
   Tests given in 1928

   Miss Nellie Power — Belmont Schools
   Tests given in 1926

The chronological age of each candidate is listed in Table IA, pages 7-12, column 5 and 6 for the National Intelligence Test; Table IB, pages 19-25, column 5 and 6, for the Terman Group Tests of Mental Ability; Table IC, pages 31-36, column 9 and 10, for the Revised Army Alpha Examination; Table ID, pages 42-47, column 2a and b, Kuhlmann-Anderson Intelligence Tests.

Using the above data as a basis, it was then possible to extend Table IA, pages 7-12; IB, pages 19-25; IC, pages 31-36; ID, pages 42-47; through the rest of the columns by a process of reduction or interpretation of scores from tables accompanying the tests.

The National Intelligence Test consists of five sections. The scores made in each section however, may be increased or decreased, i.e. weighted on the final score for the test. The scoring scheme for the National Intelligence Test is as follows:

Section	Rights	Weighting	Score
1	16	x 2	32
2	20	x 2	40
3	24	-	24
4	40 - (wrong)	-	40
5	120	x 3/10	36
	Total sum of five sections----------		172

The possible score on the test is 172. The section containing the arithmetic is Section I with a possible weighted score of 32. The arithmetic is therefore $\frac{32}{172}$ or 18.6% of the total score. This becomes a basis for figuring a new table of values for interpreting the intelligence (Continued on page 13)

(from page 6)
quotient without arithmetic. The table thus derived from the National Intelligence Tests is Table IIA, pages 14-17. This new table is based upon the assumption that the arithmetic enters proportionally, aviz, 18.6%, regardless of the size of the score.

At this point it is necessary to indicate the method of interpretation of scores in tests when the arithmetic score is omitted. This may be illustrated by taking the first case or candidate under the National Intelligence Test, Table IA, pages 7-12.

The score for candidate No.1, (Table IA) with arithmetic is 167. This is interpreted as an intelligence quotient of 130 in the tables that accompany the tests. Assuming that arithmetic has its proportional share, 18.6% and reducing 167 by 18.6%, we secure 135.94, (167-31.06). Since 167 equals an intelligence quotient of 130, so the reduced score of 135.94 must equal 130 intelligence quotient. In this particular case, Candidate No. 1, has a score of 147 when arithmetic is taken out. Reference to 147 in column 3 of Table IIA, page 17, indicates a mental age of 220 months, and this gives Candidate 1, an intelligence quotient of 138 (in column 12 of Table IA, page 7). This candidate gains 8 points in intelligence quotient, and this difference is shown in column 13, page7.

The assumption in the above procedure for interpretation of scores without arithmetic into intelligence quotients is that arithmetic enters proportionally. If this assumption is borne out by the analysis then the curve of pluses and minuses due to change of score when arithmetic is omitted, will be normal.

(continued on page 18)

Table II A (See Text)

190	35.34	154.66	229

(from page 13)

With the above explanation columns 6 to 13 (See Table IA, pages 7-12) become more or less self-explanatory. The chronological age in years and months in Table IA, pages 7-12, column 6, comes directly from column 5.

The mental age with arithmetic in Table IA, pages 7-12, column 7, is read directly from the author's tables showing the intelligence quotient interpretation of the scores (with arithmetic of course). Table IA, pages 7-12 column 9, showing the mental age in months without arithmetic, is read directly from the newly constructed tables of interpretation of scores as shown in Table IIA, pages 14-17 and explained on pages 6 and 13.

Tables for the Terman Group Test and Revised Alpha Examination have been constructed in a similar manner to show the equivalent scores with and without arithmetic.

In applying the above procedure to the Terman Group Test, it may be noted that there are ten sections of the test, and that these sections and respective total scores are as follows:

Section	Score	
1	20	
2	22	
3	30	
4	20	
5	24	
6	24	
7	20	
8	18	
9	18	
10	24	
	220	Total score for all sections

The arithmetic sections of the tests are:

Section	Score
5	24
10	28
Total arithmetic score -------	48

(Continued on page 30)

Table IB (See Text)

Terman Group Test of Mental Ability

212	46.22	165.78	254

(from page 18)
Since the possible total score on the test is 220, the proportional arithmetic is $\frac{48}{220}$ or 21.8%. To figure therefore a new table of values on the Terman Group Test for determining mental age without arithmetic, each value as appears in column I of Table IIB, pages 26-29 is reduced by 21.8%. The new values thus reduced, as shown in column 3 have the same mental age as shown in column 4, without arithmetic as were given in Terman's table for the corresponding un-reduced scores.

In the Revised Army Alpha there are eight sections. The sections with a weighted score for each section and a final total score, if all are correct, are indicated herewith:

Sections	Rights		Weighting	Score
1	24		x 2	12
2	20		-	20
3	16		-	16
4	40		-	40
5	24	- (wrong)	-	24
6	20	- (wrong)	-	20
7	40		-	40
8	20	x 2 up to a score of 8 x 3 after a score of 8	-	40
	Total Score.....			212

The arithmetic sections of the Revised Army Alpha are:

Sections	Score	
1	12	
2	20	
6	20	
	52	Total arithmetic score

The total score which can be made in the arithmetic sections, therefore, is 52. The total score on the entire test is 212. The arithmetic per cent, therefore, is $\frac{52}{212}$ or 24.5%. A new table of values without arithmetic for the Revised Army Alpha (Table IIC, pages 37-40) was constructed along lines similar to methods used with the National Intelligence Test and Terman Group Test. (See page 37)

(from page 30)

In the Kuhlmann-Anderson Intelligence Test, the method of deriving the mental age is different. Each separate section of the test is given a separate mental age depending upon the score earned in that section. (See Table ID, pages 42-47). The median of the mental ages of the various sections is the mental age that becomes a mental age of the child, and it in turn is used as a basis in determining the intelligence quotient.

The section of the Kuhlmann-Anderson tests containing the arithmetic is Section #27. To find the new median without arithmetic, the mental age received on Section #27 was omitted and the new median calculated. (Table ID, pages 42-47, column 4a and b).

If a score for a student on any test was encountered which was lower or higher than the calculated tables of interpretation for mental age, tables were extended by the following procedure. The scores with the corresponding mental ages were extended in table form by intervals of ten and the same range of months on mental age were continued for the new parts of the tables as for the published sections. Such extensions were made in Tables IIIA, page 49; IIIB, page 50; IIIC, page 51. The number of cases was very few.

Having secured the new intelligence quotient without arithmetic, Table IA, pages 7-12 column 12; Table IB, pages 19-25 column 12; Table IC, pages 31-36 column 16; Table ID, pages 42-47 column 6 and placing the data along side similar data in Table IA, pages 7-12 column 11; Table IB, pages 19-25 column 11; Table IC, pages 31-36 column 15; Table ID, pages 42-47 column 5, it became

(from page 41)
a simple matter to indicate the increases or decreases or effect of no difference in Table IA, pages 7-12 column 13; Table IB, pages 19-25 column 13; Table IC, pages 31-36 column 17; Table ID, pages 42-47 column 6. These columns showing the increases and decreases become then the immediate basis for conclusion. The conclusion is arrived at in this study by the construction of a frequency for each test, directly from the columns of changes just referred to in the second sentence above. These appear as

Table IVA for the National Intelligence Test (page 53);

Table IVB for the Terman Group Test (page 55);

Table IVC for the Army Alpha Test (page 58) and

Table IVD for the Kuhlmann-Anderson Test (page 60).

From these frequency tables were constructed graphs for each test. (See Figures 1A, page 54; Figure 1B, page 56; Figure 1C, page 59; Figure 1D, page 61).

(Discussion continued on page 52)

CHAPTER III

RESULTS OF THE STUDY

Having constructed the graphs showing the effect on scores of omitting the arithmetic, the next question is one of interpretation.

The Figures 1A, page 54; 1B, page 56; 1C, page 59; 1D, page 61; showing effect of omitting arithmetic are summarized from Tables IVA, page 53; IVB, page 55; IVC, page 58; IVD, page 60. These tables, IVA, IVB, IVC, IVD, are in turn tabulated from column 13 of Tables IA, pages 7-12; column 13 of IB, pages 19-25; column 17 of Table IC, pages 31-36; and column 7 of Table ID, pages 42-47.

It is evident that the arithmetic section of the National Intelligence Test (Table IVA, page 53) is slightly more difficult than the test as a whole, since the new intelligence scores with arithmetic omitted show many increases and few decreases. The median of the difference is a plus 6 points with a probable error ±14, see figure 1A, page 54 for graphic representation of the results.

The difference in scores when arithmetic is omitted, for the Terman Group Test, are shown in Table IVB, page 55. The changes in scores range from "0" to plus "19". The median is plus 7, with a probable error ±12. The arithmetic therefore, is slightly more difficult proportionally than in the National Intelligence Tests. (Continued on page 57)

TERMAN GROUP TEST OF MENTAL ABILITY

A Comparison of the Increases and Decreases of Scores in the Intelligence Quotient Due to Omission of the Arithmetic Section with a Hypothetical Curve Showing a Normal Curve of Distribution on a Basis of Equal Spread

(from page 52)
Graphic representation of the effect of omitting the arithmetic from the Terman Group Test is shown in Figure 1B, page 56.

The increases and decreases on the Revised Alpha Examination (Table IVC, page 58, and Figure 1C, page 59) corresponds more closely to a hypothetical normal curve of distribution constructed on the same basis. Evidently the arithmetic sections of the Revised Alpha Examination are so scaled and weighted as to throw the score very little in either direction. The distribution of changes are shown in Table IVC, page 58, and Figure 1C, page 59 is based upon this table.

Figure 1D, page 61 based upon Table IVD, page 60 showing the increases and decreases due to omitting the arithmetic sections of the Kuhlmann-Anderson Intelligence Tests, shows very close correspondence with the hypothetical normal curve of distribution. This indicates that either by chance or design the arithmetic sections of this test are scaled, in such a manner that when including the arithmetic part of the test, it leaves the median at the same point as if the arithmetic were omitted.

The statements made in the four preceding paragraphs should be interpreted as definitely limited by the data of this study. There is also the assumption that procedures throughout the tests, covering such items as directions, time allowances, etc. are correct.

NATIONAL INTELLIGENCE TESTS

TEST 1. Scale A. Form 1.

Find all the answers as quickly as you can.
Write the answers on the dotted lines.
Use the sides or bottom of the page to figure on.

Begin here:

1. Five cents make 1 nickel. How many nickels make a dime? Answer.....

2. John paid 5 dollars for a watch and 3 dollars for a chain. How many dollars did he pay for the watch and the chain? Answer.....

3. Nell is 13 years old. Mary is 9 years old. How much younger is Mary than Nell? Answer.....

4. One quart of ice cream is enough for 5 persons. How many quarts of ice cream are needed for 25 persons? Answer.....

5. John's grandmother is 86 years old. If she lives, in how many years will she be 100 years old? Answer.....

6. If a man gets $2.50 a day, what will he be paid for six days' work? Answer.....

7. How many inches are there in a foot and a half? Answer.....

8. What is the cost of 12 cakes at 6 for 5 cents? Answer.....

9. The uniforms for a baseball team of nine boys cost $2.50 each. The shoes cost $2.00 a pair. What was the total cost of uniforms and shoes for the nine? Answer.....

10. A train that usually arrives at half-past ten was 17 minutes late. When did it arrive? Answer.....

11. At 10¢ a yard, what is the cost of a piece of ribbon 10½ feet long? Answer.....

12. A man earns $6 a day half the time, $4.50 a day one fourth of the time, and nothing on the remaining days for a total period of 40 days. What did he earn in all in the 40 days? Answer.....

13. What per cent of $800 is 4% of $1000? Answer.....

14. If 60 men need 1500 lb. flour per month, what is needed per man per day, counting a month as 30 days? Ans.....

15. A car goes at the rate of a mile a minute. A truck goes 20 miles an hour. How many times as far will the car go as the truck in 10 seconds? Answer.....

16. The area of the base (inside measure) of a cylindrical tank is 90 square feet. How tall must it be to hold 100 cubic yards? Answer.....

NATIONAL INTELLIGENCE TESTS

TEST 1. Scale A. Form L.

Find all the answers as quickly as you can.
Write the answers on the dotted lines.
Use the sides or bottom of the page to figure on.

Begin here:

1. Five cents make 1 nickel. How many nickels make a dime?
Answer.....

2. John paid 5 dollars for a watch and 3 dollars for a chain. How many dollars did he pay for the watch and the chain?
Answer.....

3. Nell is 13 years old. Mary is 9 years old. How much younger is Mary than Nell?
Answer.....

4. One quart of ice cream is enough for 5 persons. How many quarts of ice cream are needed for 25 persons?
Answer.....

5. John's grandmother is 80 years old. If she lives, in how many years will she be 100 years old?
Answer.....

Answer.....

8. What is the cost of 12 cakes at 6 for 5 cents?
Answer.....

9. The uniform for a baseball team of nine boys cost $2.50 each. The shoes cost $2.00 a pair. What was the total cost of uniform and shoes for the nine?
Answer.....

10. A train that usually arrives at half-past ten was 17 minutes late. When did it arrive?
Answer.....

11. At 10¢ a yard, what is the cost of a piece of ribbon 10½ feet long?
Answer.....

12. A man earns $6 a day half the time, $4.50 a day one fourth of the time, and nothing on the remaining days for a total period of 40 days. What did he earn in all in the 40 days?
Answer.....

13. What per cent of $800 is 4% of $1000?
Answer.....

14. If 60 men need 1500 lb. flour per month, what is needed per man per day, counting a month as 30 days?
Ans.....

15. A car goes at the rate of a mile a minute. A truck goes 20 miles an hour. How many times as far will the car go as the truck in 10 seconds?
Answer.....

16. The area of the base (inside measure) of a cylindrical tank is 90 square feet. How tall must it be to hold 100 cubic yards?
Answer.....

TERMAN GROUP TEST OF MENTAL ABILITY

For Grades 7 to 12 Form A

Test 5. Arithmetic

Find the answers as quickly as you can.
Write the answers on the dotted lines.
Use the bottom of the page to figure on.

---

1. How many hours will it take a person to go 66 miles at the rate of 6 miles an hour? Answer.....

2. At the rate of 2 for 5 cents, how many pencils can you buy for 50 cents? Answer.....

3. If a man earns $20 a week and spends $14, how long will it take him to save $300? Answer.....

4. 2 x 3 x 4 x 6 is how many times as much as 3 x 4? Answer.....

5. If two pies cost 66 cents, what does a sixth of a pie cost? Answer.....

6. What is 16 2/3 per cent of $120? Answer.....

7. 4 per cent of $1000 is the same as 8 per cent of what amount? Answer.....

8. A has $180, B has 2/3 as much as A, and C has ½ as much as B. How much have all together? Answer.....

9. The capacity of a rectangular bin is 48 cubic feet. If the bin is 6 feet long and 4 feet wide, how deep is it? Answer.....

10. If it takes 7 men 2 days to dig a 140-foot ditch, how many men are needed to dig it in half a day? Answer.....

11. A man spends ¼ of his salary for board and room, and 3/8 for all other expenses. What per cent of his salary does he save? Answer.....

12. If a man runs 100 yards in 10 seconds, how many feet does he run in 1/5 of a second? Answer.....

Right.....X 2 = Score.....

REVISED ALPHA EXAMINATION FORM 7

NAME.....DATE.....

GROUP.....

DO NOT WRITE BELOW THIS LINE EXCEPT AS DIRECTED BY EXAMINER

TEST 1.

Below are five columns of ADDITIONS. You will use ONLY ONE of them. The examiner will tell you WHICH ONE to use. Be sure not to answer any other columns. After telling you which column to do, the examiner will say "ready, go," and you will then write each answer on the dotted line after the = sign. The examiner will say "stop" after 1½ minutes. You may not be able to finish all of them, but do as many as you can in the time allowed. Do any figuring on the page that you want to. The first two additions in each column are already done as they should be.

	Column 1	Column 2	Column 3	Column 4	Column 5
